

## Did you hear...

"Rather than hearing the cables, I felt as though I was hearing at an absolute level what my components are actually capable of - and that's a truly thrilling experience. I mean, this is why we got involved in high-end audio in the first place and what the ultimate pay-off should be - a more compelling, involving, all-encompassing immersion in the experience of music."

"The Aluminata Series of cables belongs to the high-end, hi-performance category, which they share with few other players. I feel that JPS has successfully produced a cable that is made for the equipment I like to listen to- that's high resolution audio with the appropriate respect for the music."

"At the very least, we all owe a tip of the hat to Joe Skubinski at JPS Labs for taking the effort to develop this wire, and making the financial commitment to bring it to the marketplace. This wire opens up a whole new category of cable and is a very significant contribution to the enjoyment of recorded music. Hopefully it will find homes on both the recording and playback sides of the fence."

"I was unprepared for just how good your cables are"

"The Kaptovators belong on anyone's short list when auditioning power line components regardless of type or cost. Are the Kaptovators too expensive for the sound improvements offered? No. Far too many audio enthusiasts move through component upgrades like water... I am confident that if consumers take AC delivery [and these cables] seriously... they may be surprised at how clean, dynamic and pure their present equipment really is. Now how much money would that save?"

"How incredible it is to hear an audio system with the wire induced dynamic limitations removed. The second thing that one notices is the immediate lack of tonal blurring from one note to the next... The end result is music that simply sounds more like real music."

"At the end of the day, all I can say is that the Aluminatas are, without a doubt and by a significant margin, the best audio cables I've used."

"Mate, I realize as a business owner, email must be a chore and I apologize for the length of this one but just had to tell you how thrilled I am. Thank you..."

"It all started with an audition of a pair of Superconductor RCA interconnects. Today, my system is completely wired with JPS (interconnects, speaker cables & power cords). It is very difficult to explain with words the unbelievable improvements these "World's Finest Cables" gave to my dedicated home theater. The only way to understand is to experience it for oneself."

"The overriding sensation was of having the sound supercharged and liberated from the speakers. Music seemed to exist independent of the playback chain. I have never experienced this before."

"The differences made by the JPS Aluminata products were by far the most drastic changes I've ever heard when going from one interconnect, speaker cable, or AC cord to another. Put a little more bluntly, I've never heard wire do *this* before."
